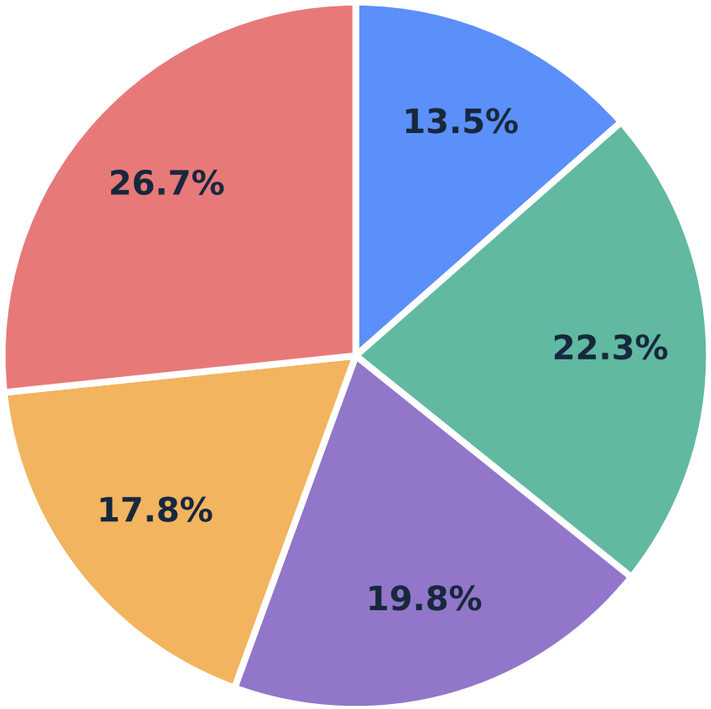
Where did the execution time go?

Two-bowl run | White bowl → Green bowl | 30 October 2026 | Task 897fe062



TOTAL ELAPSED TIME

377.5 s / 6 min 17.5 s

Initial perception & preparation — **51.0 s | 13.5%**

Capture and interpret the scene; select the first action; validate inputs and plan the white bowl motion.

White bowl pick-and-place — **84.0 s | 22.3%**

Approach, open the gripper, descend, grasp and lift; carry to the tray, release, retreat and return home.

Between-bowl observation & preparation — **74.8 s | 19.8%**

Check the white bowl placement; observe the green bowl; select the next action, validate inputs and plan motion.

Green bowl pick-and-place — **67.1 s | 17.8%**

Approach, open the gripper, descend, grasp and lift; carry to the tray, release, retreat and return home.

Final visual confirmation — **100.6 s | 26.7%**

Repeat observations to confirm placement and clearance. View-boundary errors interrupted confirmation; task ended partial.

Timing basis: ROS log window, 17:54:14–18:00:32 (UTC+8). Preparation includes decision, startup and waiting overhead.
Final confirmation was the largest single phase (26.7%). The later independent verification is excluded.
